

Visualisation in Data Science

2025/2026

Project instructions

Organisation

You will work on the project in groups of four students. This year there are two different datasets (Football and Madrid) we will work on. Your group will be assigned one dataset.

Phases

The project will have the following phases: design, peer review and implementation.

1. Design

In the first phase, you will be asked to fill in a report. You will find a report template in the Design assignment in Blackboard. The report will contain:

- Data description
- The tasks you came up with to operationalise the questions
- Storyboard
- The designs of the visualisations you plan to use

2. Peer review

You will be asked to give feedback on three design reports from three other groups that worked on the other dataset. You will find a feedback template in the Peer review assignment in Blackboard.

3. Implementation

You will receive feedback from fellow students (three peer-review reports) and you will work on implementing the design you came up with in the first phase in a programming language of your choice. At the end of this phase, you will deliver a report containing the following:

- Brief description of the project
- Exploratory data analysis
- Written description of the implemented visualisations with comment on how they have changed from the initial designs
- Link to video of screencast where all members of the participate in which the data visualisation is explained

Questions

Please ask questions about the project on the Discussion boards in Blackboard. Other questions can be directed to me via email: inigo.bermejo@uhasselt.be.
